Quarterly Performance (%) of Mi30 vs CNX500

The FY1718 has been a roller coaster ride for Mi30. After a good start it went on to cross +40% in performance by early January 2018 before giving up some of the gains in the last quarter of the FY1718. Overall for the year, Mi30 has delivered returns of +26.35% which are well above the +10.25% / +11.47% clocked by the Nifty50 and Nifty500 indices respectively. The drawdown experienced towards the end was nearly -13% which is lower than that seen in FY1617 at 16%.

The strategy had 65 exits in the whole year. There were 39 (60%) winning exits and 26 (40%) losing ones. The average win on the winning trade was +47% while the average loss on losing trades was -11%. The overall gain thus, was highly skewed in the favour of the wins despite the low winning percentage.

The star performers exited this year were IBVENTURE (550%) GNFC, HATSUN, GVKPIL APLAPOLLO, MANNAPURAM (all +100%) The biggest losers were DCB (-32%), IBREALEST (-22%), BHARATFIN (-25%).

The strategy has 66% cash at the end of the quarter and has exited many of its positions. It will now wait patiently for the momentum to re-start to deploy the monies again. The effectiveness of the capital preservation policies that are in place were well demonstrated in Q31617 and Q41718 again. We feel very confident about the strategy going forward given its performance in last many years.
