Quarterly Performance (%) of Mi30 vs CNX500

The FY1819 has been a year of huge divergence between large caps vs mid and small caps. While large caps largely remained in a bull rally, many of the mid and small caps were roiled. Mi30 following the top 500 mkt cap stocks also underperformed the CNX500 index. Overall for the year, Mi30 has delivered returns of -4.54% which is well below the benchmark at near +8.43%.

The strategy started the year with high cash levels at 66% which were deployed in late Q2 and early Q3 but the sharp sell off in Q3 took us back to very high cash levels thus losing ground on the quick build up post that.

The average cash held during the year was north of 30% and approx 2% gains would have accrued due to that and dividends which have not been included in the performance.

The strategy had 62 exits in the whole year (a overall churn of 2 times in a consolidation year which is normal). The exits were majority losers .

The star performers in the portfolio are BATAINDIA, MUTHOOTFIN and VINATIORGA among others. The biggest losers were GODREJCP and ADANIPOWER.

The strategy has under 1% cash and is almost fully invested. We look forward to strong trends in mid cap space to help us outperform in the quarters ahead. Overall we are satisfied with the tempered performance this year given the tough conditions in the markets.

All users who have joined during or post Q3FY1718 or later are currently performing below our service guarantee level of 8% annualized returns. The service will continue till we achieve that. A mailer specific to your account with details on your extension will be sent later in Apr 2019.
